

Recommendation Letter for Karthik Raja KANDAVEL

To Whom It May Concern,

It is my pleasure to wholeheartedly recommend Karthik Raja KANDAVEL for a role in AI Engineering, Data Science, or Cloud Architecture. Karthik has worked as an AI & Data Science Engineer Intern at Faradae since March 2026, and as his CEO and mentor, I have had the privilege of observing his rare ability to bridge the gap between research and real-world deployment.

We are a small company. Karthik immediately took ownership of mission-critical projects that directly support our industrial battery storage operations and AI-driven systems. He developed and deployed our predictive optimization engine, which now powers real-time decision-making for energy management. This involved building a complete cloud infrastructure from scratch, enabling seamless data ingestion, processing, and deployment. Additionally, Karthik designed and delivered our Agentic RAG system for legal contract analysis, which he presented to our leadership team and is now deploying to our cloud environment. His ability to transform complex research into scalable, production-ready solutions has been invaluable to our team.

What truly sets Karthik apart is his ability to consistently deliver results. He is proactive, collaborative, and deeply committed to solving complex problems with robust, scalable solutions. His work ethic and technical acumen make him an invaluable member of any team.

I strongly recommend Karthik to any organization seeking a talented and reliable engineer. He is the kind of engineer who can own projects end-to-end, from concept to deployment, and drive meaningful impact.

Please feel free to contact me if you would like to discuss Karthik's qualifications further.

Sincerely,

Thomas Lawson

CEO & Founder, Faradae
